

Kaaveh Mohamedi

Senior Android Engineer

Tehran, Iran (Open to relocation) | +98 930 296 2489 | Kaaveh@pm.me | [LinkedIn.com/in/Kaaveh](https://www.linkedin.com/in/Kaaveh)

+7 years building consumer Android apps. Owned a new product end-to-end on a platform with 10M+ MAU, the company's fastest-growing launch ever. Cut CI build times ~40% through modularization. Active in the community: 4 conference talks, 8 [Medium](#) articles, 500+ [GitHub](#) stars, and company-wide internal talks on AI-assisted development.

Experience

Senior Android Engineer – Footballi

February 2025 – Present

Live-streaming sports platform for Mobile & TV, 10M+ Monthly Active User.

- Shipped the **Android TV** app in ~2 months, making it the company's fastest-growing product ever. Owned product and UX decisions, delivering **Jetpack Compose** for TV with Navigation3, Media3/ExoPlayer, and custom D-pad focus handling.

Android Engineer - GityMarket

June 2019 – February 2025

E-commerce platform powering 1,000+ retail businesses.

- Reduced CI build times by 40% (1.5h -> ~50min) by refactoring module structure and inter-module dependencies.
- Extended and maintained a **Server-Driven UI** framework, adding new widgets that enabled easier deployment of new features without needing a new Android app release.
- Implemented a centralized **Design system** (themes, tokens, shared widgets) used across modules - reduced UI inconsistency and dev time for new screens by ~20%.

Independent Android Consultant - Consulting & Advisory (alongside full-time roles)

- Designed the native Android architecture to migrate a major cryptocurrency exchange from a PWA.
- Served as technical consultant to a bank, guiding the refactoring of its mobile app architecture.

Skills

Languages & Concurrency: Kotlin, Kotlin Multiplatform (KMP), Java, Coroutines, Flow

UI & Platforms: Jetpack Compose, Android TV, Material 3, Navigation 3, XML Views, Media3, ExoPlayer

Architecture & DI: Clean Architecture, MVI, MVVM, Modularization (multi-module), Server-Driven UI, SOLID, Dagger, Hilt, Koin

Data & Networking: Retrofit, OkHttp, Ktor, GraphQL, Room, SQLDelight, DataStore, WorkManager, Firebase

Testing & Quality: TDD, BDD, JUnit, Kotest, MockK, Mockito, Turbine, Espresso, Robolectric, Detekt, ktlint

Build, CI/CD & Observability: Gradle, Kotlin DSL, GitLab CI, GitHub Actions, Crashlytics, Firebase Analytics, Sentry, AppMetrica

AI-Assisted Development: agentic workflows, MCP, prompt engineering, context engineering, Spec-Driven Development

Community & Speaking

- Publish software engineering and AI-driven development videos on [CodeWithKaaveh](#).
- Published a master course on SqlDelight via Droidcon, the global Android developer conference organization partnered with Google, Meta, and Amazon.
- Mentored 20+ software engineers.**

Projects

ComposeNews - github.com/Kaaveh/ComposeNews

Reference Compose architecture project: modularized feature/data/domain layers, design system, MVI, CI with quality gates; 370+ stars, used as a teaching reference in a conference talk

SDP-Compose - github.com/Kaaveh/sdp-compose

Published Kotlin library providing scalable size units for Jetpack Compose.

Komposer - github.com/Gity-Market/Komposer

Server-driven UI library for Compose with a KMP contract shared between Kotlin backend and client.

Education

Master of science in Software engineering - Tarbiat Modares University

Certificates

Droidcon: Test-Driven Development on Android – [Credential ID](#) | JetBrains: Kotlin for Java Developers – [Credential ID](#)

Languages

English - C1 | German - A1 (actively learning)
